

**Assignment -2**  
Python Programming

Assignment Date	19 September 2022
Student Name	U.UDHAYA PRABHAKARAN
Student Roll Number	311519205058
Maximum Marks	2 Marks

**Question-1:**

Create a registration page in html with username, email and phone number and by using post method display it in next html page.

**register.html**

```
<html>

<head>

    <title>Registration page</title>

    <link rel="stylesheet" href="{{url_for('static', filename='register.css')}}">

</head>

<body>

    <div class="center"> <br /><br />

    <form action="/register" method="POST">

        <h1>Register</h1> <br /><br />

        <p> Enter username:</p>

        <input type="text" name= "username" />

        <p> Enter email:</p>

        <input type="email" name="email"/>

        <p> Enter Phone number:</p>

        <input type="text" name="phone"/>

        <br><br><br>

        <input type="submit" value="submit" />

    </form>

    </div>

</body>

</html>
```

### **register.css**

```
.center{  
margin: auto;  
width: 10%;  
}  
  
h1{  
text-align:center;  
}  
  
input{  
border-radius:5px;  
padding:7px;  
}
```

### **home.html**

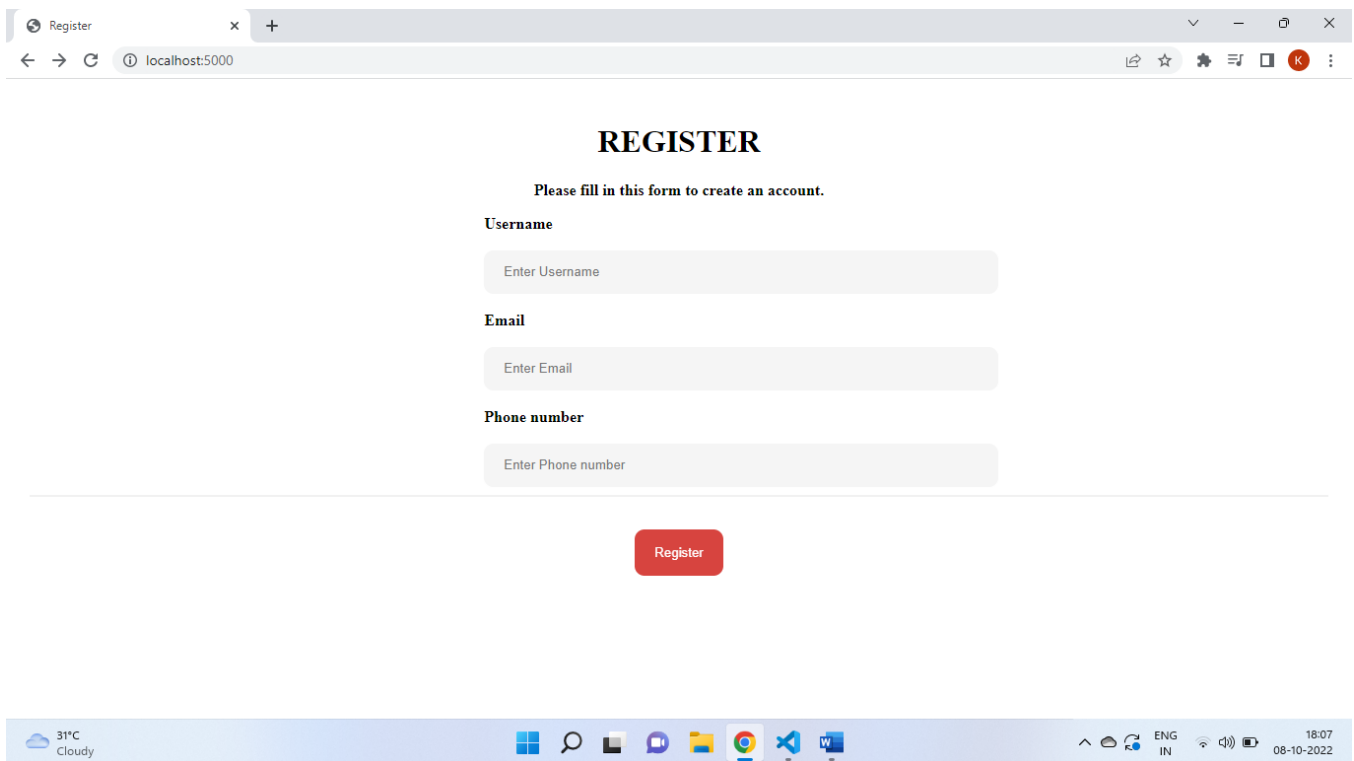

```
<html>  
<head>  
    <title>Home</title>  
</head>  
<body style="text-align:center">  
    <h2>Welcome {{username}} </h2><br/><br/>  
    <b>Username</b> - {{username}}<br/><br/>  
    <b>Email Address</b> - {{email}}<br/><br/>  
    <b>Phone number</b> - {{phone}}<br/><br/>  
</body>  
</html>
```

### **Register.py**

```
from flask import Flask,render_template,request  
app=Flask(__name__)  
@app.route("/")  
def home():  
    return render_template("register.html")  
@app.route("/register",methods=["POST","GET"])
```

```
def register():  
    if request.method=="POST":  
        username=request.form.get('username')  
        email=request.form.get('email')  
        phone=request.form.get('phone')  
        return render_template("home.html",username=username,email=email,phone=phone)  
  
if __name__ == '__main__':  
    app.run(debug=True)
```

### Output:

The screenshot shows a web browser window with a single tab titled 'Register'. The address bar shows 'localhost:5000'. The page content is centered and features a registration form. At the top, the word 'REGISTER' is displayed in a large, bold, black serif font. Below it, a smaller line of text reads 'Please fill in this form to create an account.' The form consists of three input fields, each with a label above it: 'Username', 'Email', and 'Phone number'. Each label is in a bold, black serif font. The input fields are light gray with rounded corners and contain the placeholder text 'Enter Username', 'Enter Email', and 'Enter Phone number' respectively. Below the input fields, there is a red button with the word 'Register' in white text. The browser's taskbar at the bottom shows the system clock as 18:07 on 08-10-2022, along with various system icons and open applications like Chrome, Word, and Excel.

**Question-2:**

Develop a flask program which should contain at least 5 packages used from pypi.org.

**Packages used:**

1. render\_template
2. url\_for
3. redirect
4. request
5. abort

**Program :****python\_packages.py**

```
from flask import Flask,render_template,request,redirect,url_for,abort
```

```
app=Flask(__name__)
```

```
@app.route("/")
```

```
def home():
```

```
    return render_template("register.html")
```

```
@app.route("/register",methods=["POST","GET"])
```

```
def register():
```

```
    if request.method=="POST":
```

```
        username=request.form.get('username')
```

```
        email=request.form.get('email')
```

```
        phone=request.form.get('phone')
```

```
        if username=="admin":
```

```
            return redirect(url_for("admin_page"))
```

```
        return render_template("home.html",username=username,email=email,phone=phone)
```

```
@app.route("/admin")
```

```
def admin_page():
```

```
return render_template("admin.html")
```

```
@app.route("/validate",methods=["POST","GET"])
```

```
def validate_admin():
```

```
    if request.method=="POST":
```

```
        password=request.form.get('password')
```

```
        if(password=="abcd"):
```

```
            return render_template("admindashboard.html")
```

```
        else:
```

```
            abort(403)
```

```
if __name__ == '__main__':
```

```
    app.run(debug=True)
```

## register.html

```
<html>
```
